

## Artificial Intelligence statement

The capacity for artificial intelligence (AI) to create content (sometimes referred to as generative AI) has been developing rapidly and poses challenges for learning and teaching in higher education, especially regarding maintaining academic integrity.

As a result, we require a statement acknowledging the use of AI to be included in the course reports. A failure to appropriately reference externally sourced, non-original work can result in academic misconduct, failing the class, and being investigated as a violation of the general academic authorship policy.

In practice, you should name the tool and how it was used by including the appropriate statement at the end of your submission under a separate section titled “The use of artificial intelligence tools in the present work”:

Choose then one or several of these options, depending on your use or not of AI:

- No content generated by AI tools has been presented as my own work.
- I acknowledge the use of [AI system and link] to generate materials for background research in drafting this assessment. The prompts I have used were the following:

[Prompt 1]

[Prompt 2]

...

- I acknowledge the use of [AI system and link] to generate materials that were included within my final assessment in modified form. The following were initially generated by AI: <Provide a bullet point list of to prompts used and the generated material, and explain the modifications you have made to the original generated material>.

[Prompt 1] → [generated material] → [modification you have made]

[Prompt 2] → [generated material] → [modification you have made]

...
